Lighthouse Analysis

Scores Summary:
• Performance: 53/100
• Accessibility: 76/100
• Seo: 83/100
• Best Practices: 96/100

Performance Metrics:
• First Contentful Paint: 7.2 s
• Largest Contentful Paint: 12.8 s
• Total Blocking Time: 140 ms
• Cumulative Layout Shift: 0.075
• Speed Index: 10.8 s

Accessibility Issues:
• **`button`, `link`, and `menuitem` elements do not have accessible names.**
When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. [Learn how to make command elements more accessible](https://dequeuniversity.com/rules/axe/4.11/aria-command-name).

• **Background and foreground colors do not have a sufficient contrast ratio.**
Low-contrast text is difficult or impossible for many users to read. [Learn how to provide sufficient color contrast](https://dequeuniversity.com/rules/axe/4.11/color-contrast).

• **Image elements do not have `[alt]` attributes**
Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. [Learn more about the `alt` attribute](https://dequeuniversity.com/rules/axe/4.11/image-alt).

• **Links do not have a discernible name**
Link text (and alternate text for images, when used as links) that is discernible, unique, and focusable improves the navigation experience for screen reader users. [Learn how to make links accessible](https://dequeuniversity.com/rules/axe/4.11/link-name).

• **`[user-scalable="no"]` is used in the `<meta name="viewport">` element or the `[maximum-scale]` attribute is less than 5.**
Disabling zooming is problematic for users with low vision who rely on screen magnification to properly see the contents of a web page. [Learn more about the viewport meta tag](https://dequeuniversity.com/rules/axe/4.11/meta-viewport).

• **Touch targets do not have sufficient size or spacing.**
Touch targets with sufficient size and spacing help users who may have difficulty targeting small controls to activate the targets. [Learn more about touch targets](https://dequeuniversity.com/rules/axe/4.11/target-size).

• **Elements with visible text labels do not have matching accessible names.**
Visible text labels that do not match the accessible name can result in a confusing experience for screen reader users. [Learn more about accessible names](https://dequeuniversity.com/rules/axe/4.11/label-content-name-mismatch).

Seo Issues:
• **Links are not crawlable**

Search engines may use `href` attributes on links to crawl websites. Ensure that the `href` attribute of anchor elements links to an appropriate destination, so more pages of the site can be discovered. [Learn how to make links crawlable](https://support.google.com/webmasters/answer/9112205)

• **Image elements do not have `[alt]` attributes**
Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. [Learn more about the `alt` attribute](https://dequeuniversity.com/rules/axe/4.11/image-alt).

Best Practices Issues:
• **Displays images with incorrect aspect ratio**
Image display dimensions should match natural aspect ratio. [Learn more about image aspect ratio](https://developer.chrome.com/docs/lighthouse/best-practices/image-aspect-ratio/).
